ENGINEERING**

# INDEX OF OUR SOLUTION

- Problem Statement
- Details of the App
- Users Covered
- Feasibility of the App

# PROBLEM STATEMENT

- All students demand a single platform where they may obtain all of the study resources required for their studies.
- Freshers in corporate employment face challenges in their early stages. As a result, they want a platform that allows them to readily access prior materials and presentations.

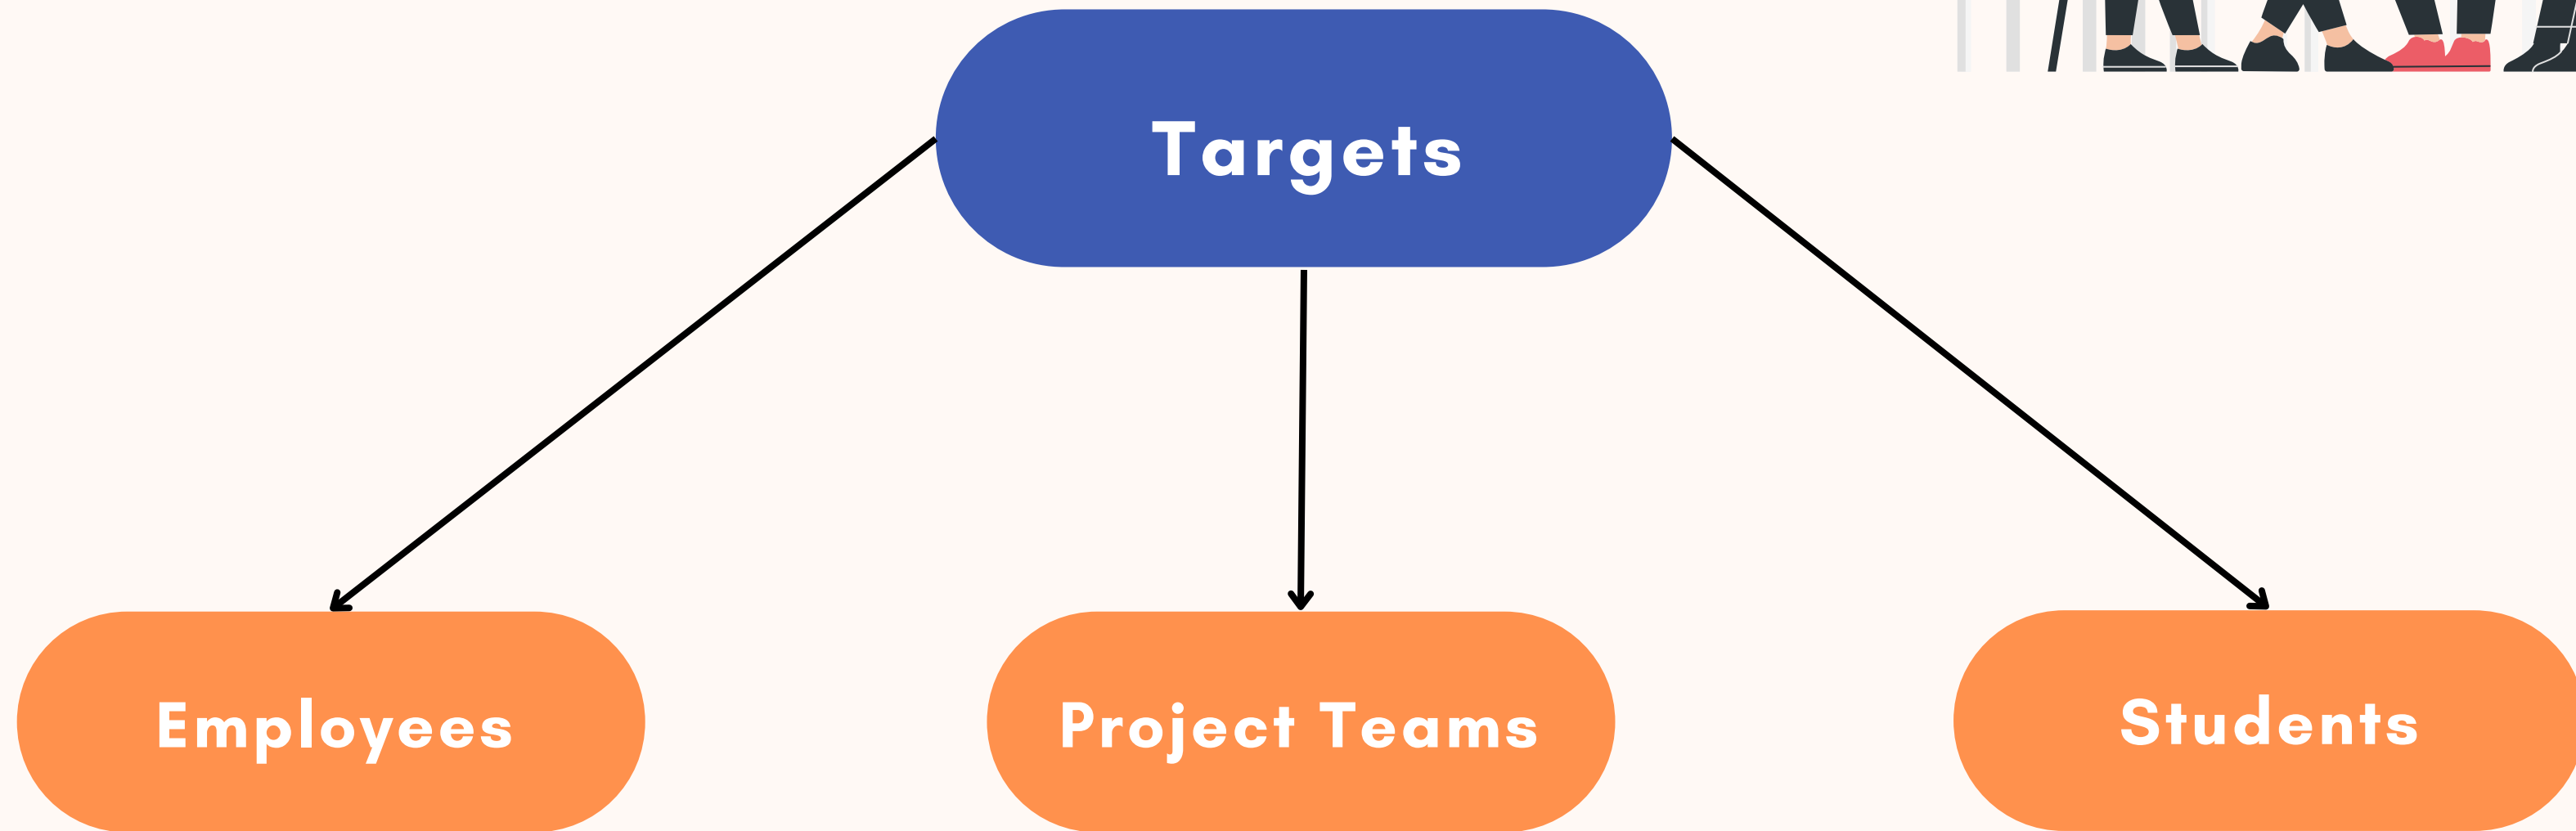

# Our Solutions

We build a platform where students, staff, and other organisations may share essential information and resources as needed.

We also have a section where students, employees, and organisations may create servers based on their needs, and data can be accessed by new members with the organization's permission.

# USERS COVERED

## FEASIBILITY

- Because Flutter is the primary tech stack, the project's development costs are extremely low. The servers will be the only expense.

## RELEVANCE

- By reducing other distractions, our software includes capabilities that can improve users' attention and concentration.

## SCALABILITY

- Flutter is the main tech stack of this entire project. This gives us flexibility to use the same codebase for web, android and ios.

## IMPACT

- Our app's significance is that it gives users access to a separate platform with only the resources they need.

# THANK YOU

for considering our project.
